

CHIEF PSYCHIATRIST
of Western Australia

Chief Psychiatrist of Western Australia

2021-2022: Quarters 1-2, 3-4, and Financial Year

The rates of seclusion and restraint occurring in authorised mental health services in Western Australian (WA) during the 2021/22 financial year (FY) (1 July 21 -30 June 22) and separately for quarters 1-2 and quarters 3-4 are shown in Figures 1 - 4. The prone restraint rates for each authorised mental health service are shown in Figure 5.

It is important to note that the variability in the rates of seclusion and restraint between hospitals may be due to a variety of factors such as the acuity of the patient population. A very small number of acutely unwell patients with challenging behaviours at a service can have a disproportionate effect on the rates of seclusion and restraint. The Chief Psychiatrist consults with the relevant mental health services about their practices and strategies for reducing the use of restrictive practices in these complex cases and is confident that the services are providing high quality care.

Please note RPH opened in June 2022.
